

A powerful, global businessplan:

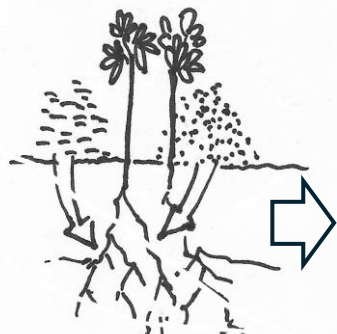

- collect, clean up plastic waste
- put this organic waste to pyro- and plasmalysis
- get, store, transport cheep green hydrogen safely
- get char to fertilize the desert/s and to regenerate farmland
- enable and start good farming
- produce renewable resources & (semi-)fabrics
- satisfy all industries with renewables
- doing so, make circular economy real

H2 hydrogen

- bottled
- transportable
- mobility, industry

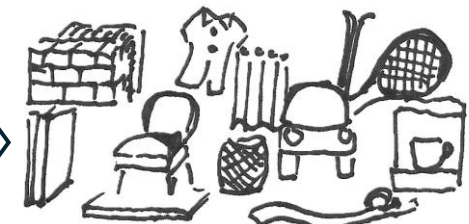

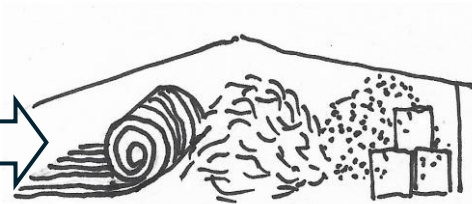

**carbon
char**

- regenerate farming
- fertilize deserts

renewable
resources

sooner or later all
consumer products
are organic and go
into pyro-/plasmalysis
